

1. Perturb one knob

classifier-free guidance g
prompt, seed, steps fixed
empty-prompt baseline

2. Full grid

$g \times \text{prompt} \times \text{seed}$
two architectures
every image kept

3. Score blind

fixed rubric, g hidden
shuffled, deterministic
judge panel + human subset

4. Pre-registered test

metric, direction, null
committed before the run
whole tree published

Un-blinding happens only at step 4. The same four steps are instantiated three times (Exp 01, Exp 02, Exp 03).
